Employment History

2024.05 – Present

📌 **Senior Applied Scientist (Full-time), Tencent Hunyuan3D, China**

Native 3D generative foundation models: shape generation, mesh generation and 3D VAE representation learning.

- First author of **Hunyuan3D 1.0**, Tencent's first open-source 3D generative system; core author across the **2.0 / 2.1 / 2.5 / Omni** releases and **HunyuanWorld 1.0**.
- Series adopted by the open-source community at scale: **34k+** cumulative GitHub stars and **~4m** downloads on Hugging Face.
- Scaled shape-generation training to **billion-parameter** flow-based diffusion transformers on multi-node GPU clusters, and designed sparse/vertex-latent 3D VAEs that cut latent length while raising reconstruction fidelity.
- Published **17** papers with the team since joining, at CVPR, ICCV, ICML, NeurIPS and AAAI; mentored junior researchers and interns on several of them.

2023.05 – 2023.11

📌 **Applied Scientist Intern (Full-time), Amazon, Australia**

Single-view 3D reconstruction and generation via diffusion models.

- Proposed **ViewFusion**, a *training-free* interpolated-denoising scheme that extends single-view-conditioned diffusion models to multi-view conditioning with no fine-tuning.
- Improved multi-view consistency and reconstruction quality over state-of-the-art baselines on PSNR / SSIM / LPIPS across benchmark datasets.
- Work published as first author at **CVPR 2024**; code released publicly.

Education

2019 – 2023

📌 **Ph.D., The University of Sydney, Australia.**

Supervisors: Dr. Luping Zhou, Dr. Guosheng Lin and Dr. Wanli Ouyang

Thesis title: *Enhancing Novel-class Generalization of Deep Learning Models for Vision Tasks.*

2015 – 2019

📌 **B.Sc. in Physics, Nanjing University, China.**

Thesis title: *Application of Deep Learning in Medical Imaging.*

Research Publications

Google Scholar (Aug. 2026): **1166** citations, *h-index* **15**, *i10-index* **19**. Core author of the **Hunyuan3D** series — among the most widely adopted open-source 3D generative models, with **34k+** cumulative GitHub stars.
